ADMIN AND THERAPIST PORTAL

Bringing the staff side into the new Mindwell look

The client side now uses the final logo colours (navy, orange, green) and Plus Jakarta Sans. Admin and therapist pages still use the older teal and salmon set, so the clinic looks like two different products depending on who is logged in.

My view: yes, but as a re-skin plus a few targeted fixes, not a rebuild.

Staff pages should stay calm and dense: no plants, no big hero. They share the client's colours, type and status chips, and fix **six real problems** found on the current screens. Nothing changes in the database. Estimate: **about 3 to 4 working days**.

Navy 900 · sidebar

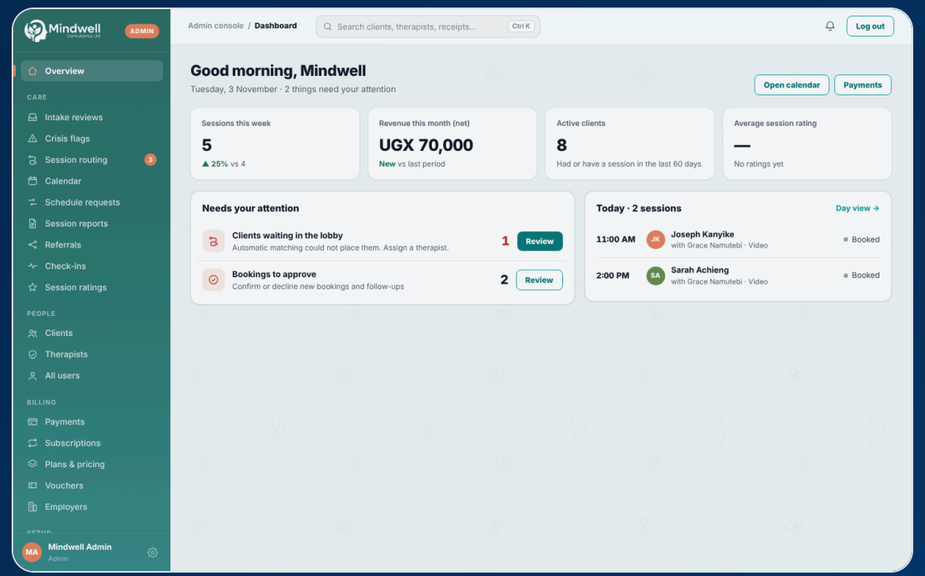

Navy 700 · buttons

Orange · now / urgent

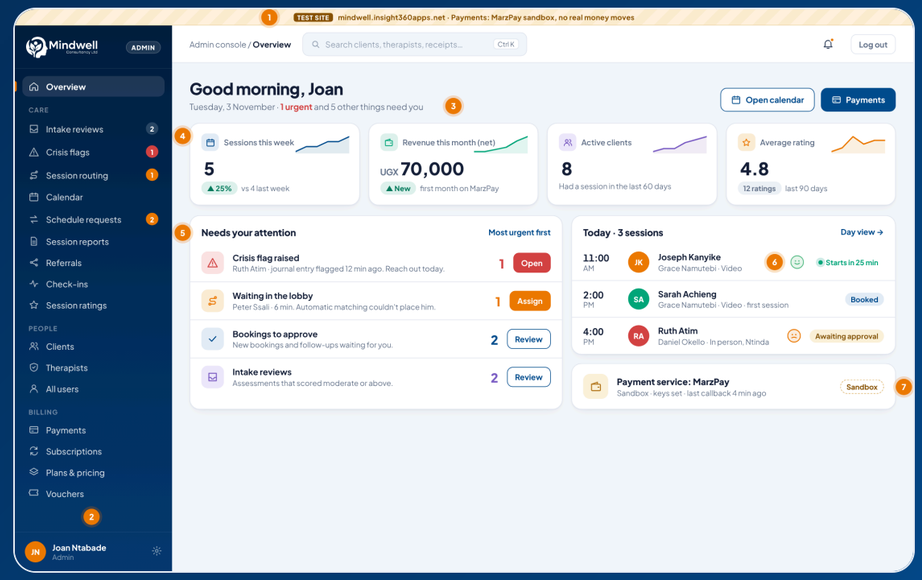

Green · paid / done

TODAY

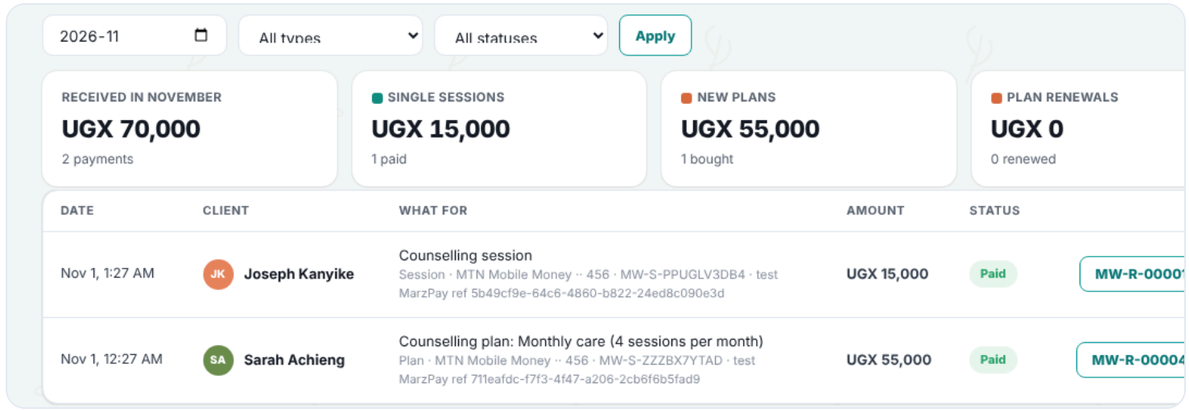

PROPOSED

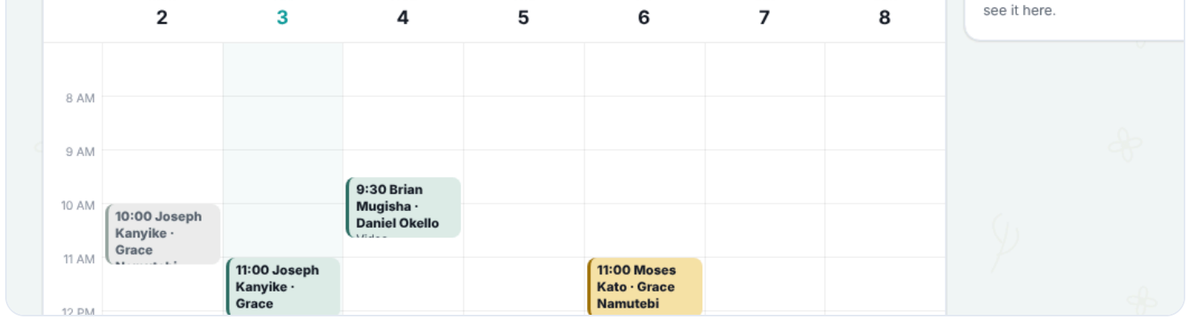

Six things worth fixing

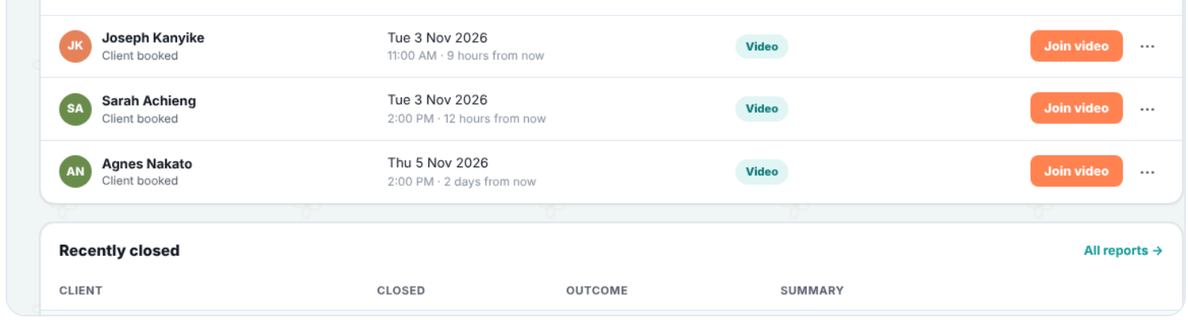

1 **Two colour families.** Teal sidebar and salmon accents (#2F6F66 / #E8825E) next to the new navy and orange logo. Different font too, so it reads as a different product from the client side.

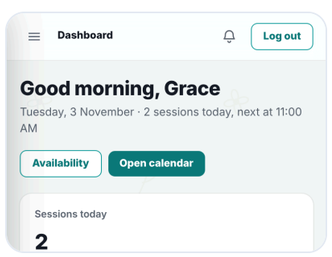

2 **Payments: filter text is clipped** ("All tvpes" loses its bottom). There's no way to tell MarzPay from Flutterwave, and test payments are hidden in a long grey reference line.

3 **Calendar blocks cut off their own text** ("Grace Namutebi" and "Video" are clipped). Therapists aren't colour-coded, and "awaiting approval" looks the same as booked.

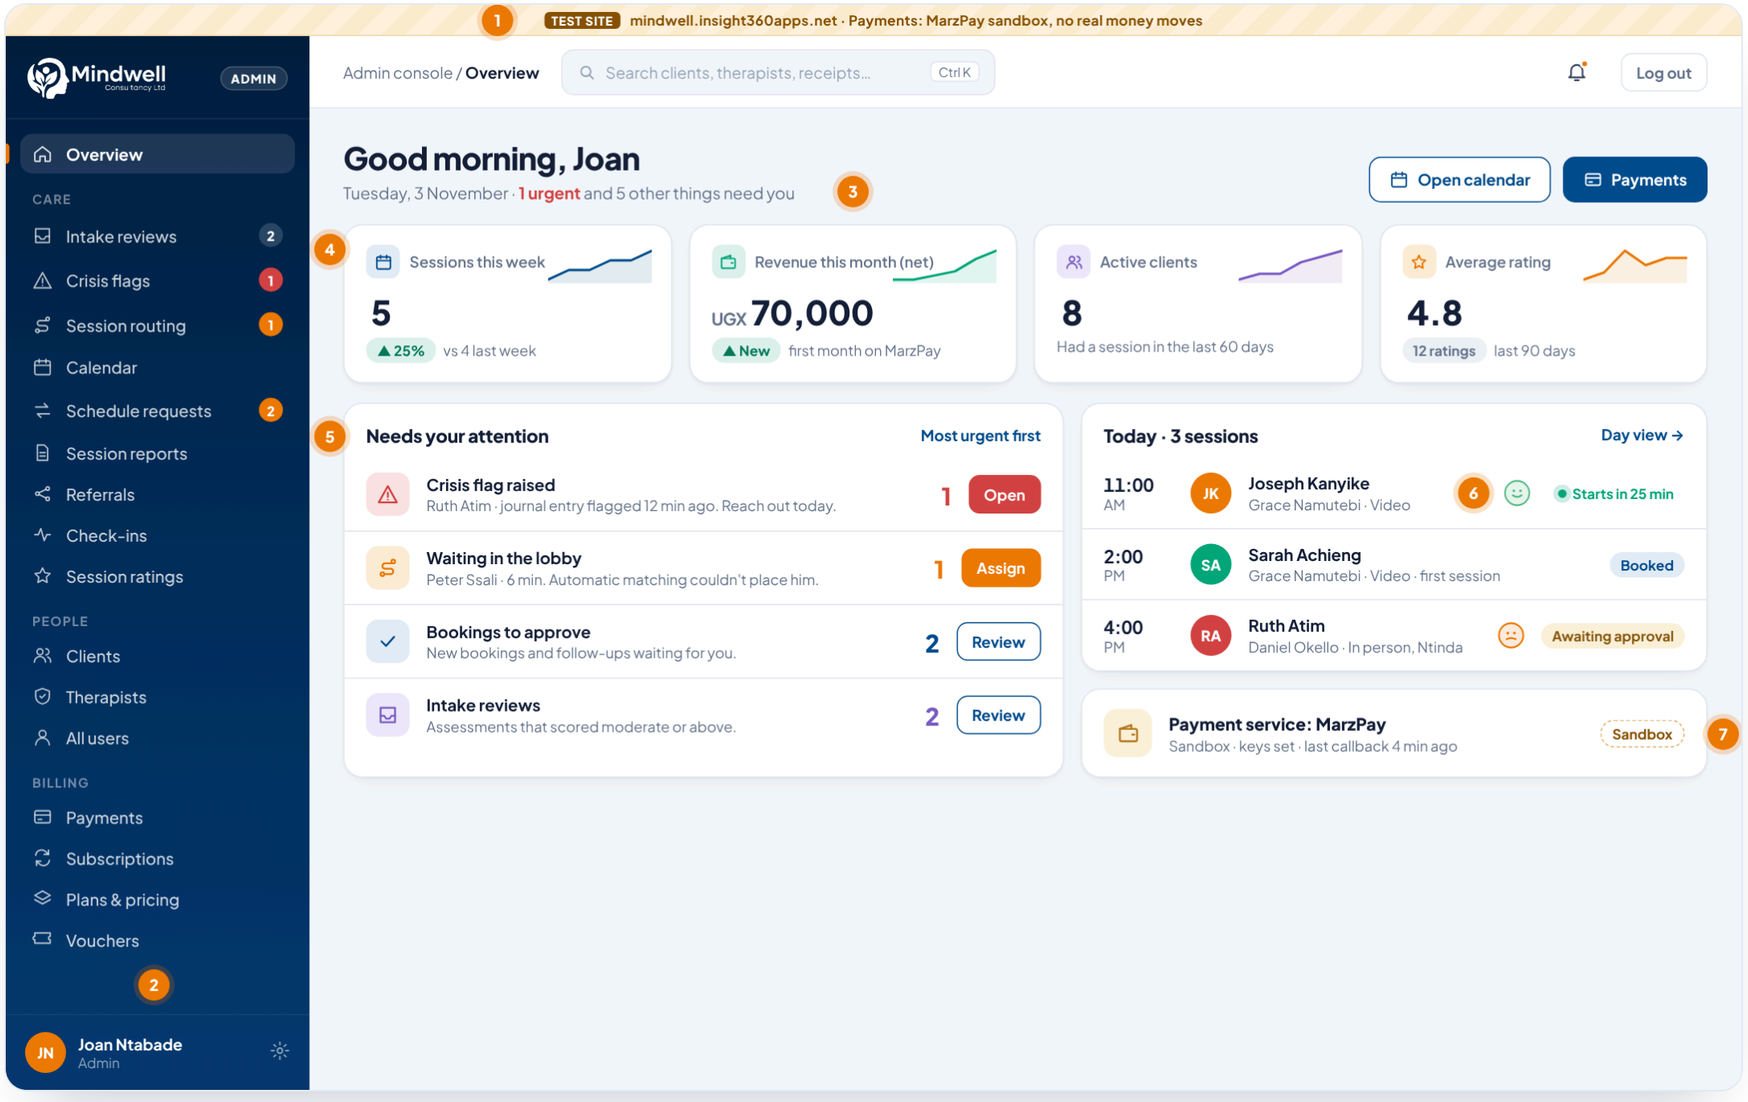

4 **"Join video" shows 9 hours early** on every upcoming session, in the same bright orange. It should say when the room opens, and only light up when it's actually time.

5 **On a phone, therapists scroll past four big number tiles** before they reach today's sessions. The thing they need (next session, Join) should come first.

6 **No sign you're on the test site.** With MarzPay in sandbox, staff could mistake test payments for real ones. A thin ribbon on staging (never on live) removes that risk.

Overview

1 Test-site ribbon
Only when APP_ENV is staging or local. Says which payment service is in sandbox.

2 Navy sidebar, orange marker
Same navy as the logo. Orange is kept for "current page" and counts; red only for crisis flags.

3 Greeting that ranks
"1 urgent and 5 other things" so the admin knows at a glance whether today is calm.

4 Number tiles with a trend
Coloured icon, a small six-week line and an up/down chip, the same style as the client's Progress page.

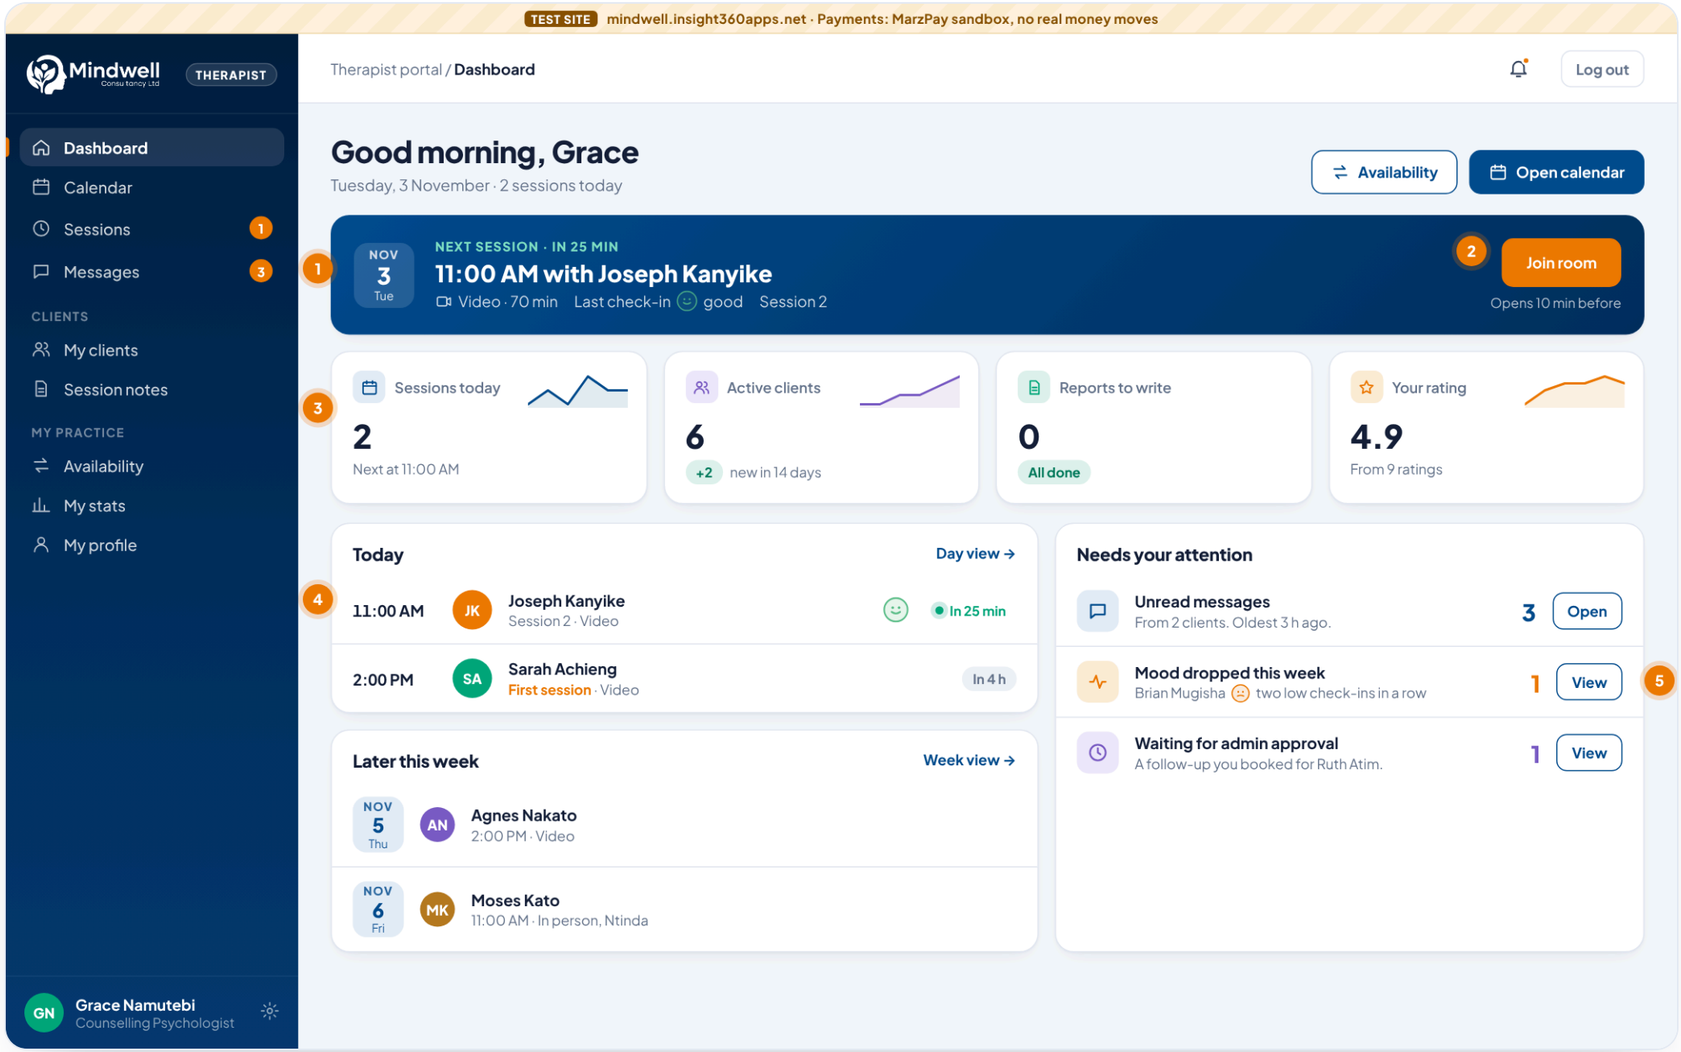

5 Attention list, most urgent first
Crisis flags on top in red, then the lobby, approvals and intake reviews. One clear button each.

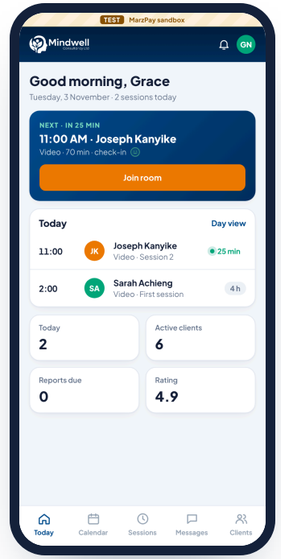

6 Client mood faces
The same faces clients pick in the app, shown next to today's sessions (last check-in).

7 Payment service card
Shows MarzPay or Flutterwave, sandbox or live, and when the last callback arrived. Where the admin switch would live, if we add it.

PROPOSED · THERAPIST

Dashboard, desktop and phone

1 Next session first
A navy card like the client's: date block, client, check-in face, session number.

2 Join only when it's time
"Opens 10 min before", then the orange button. The minutes depend on Dr. Ntabade's join window.

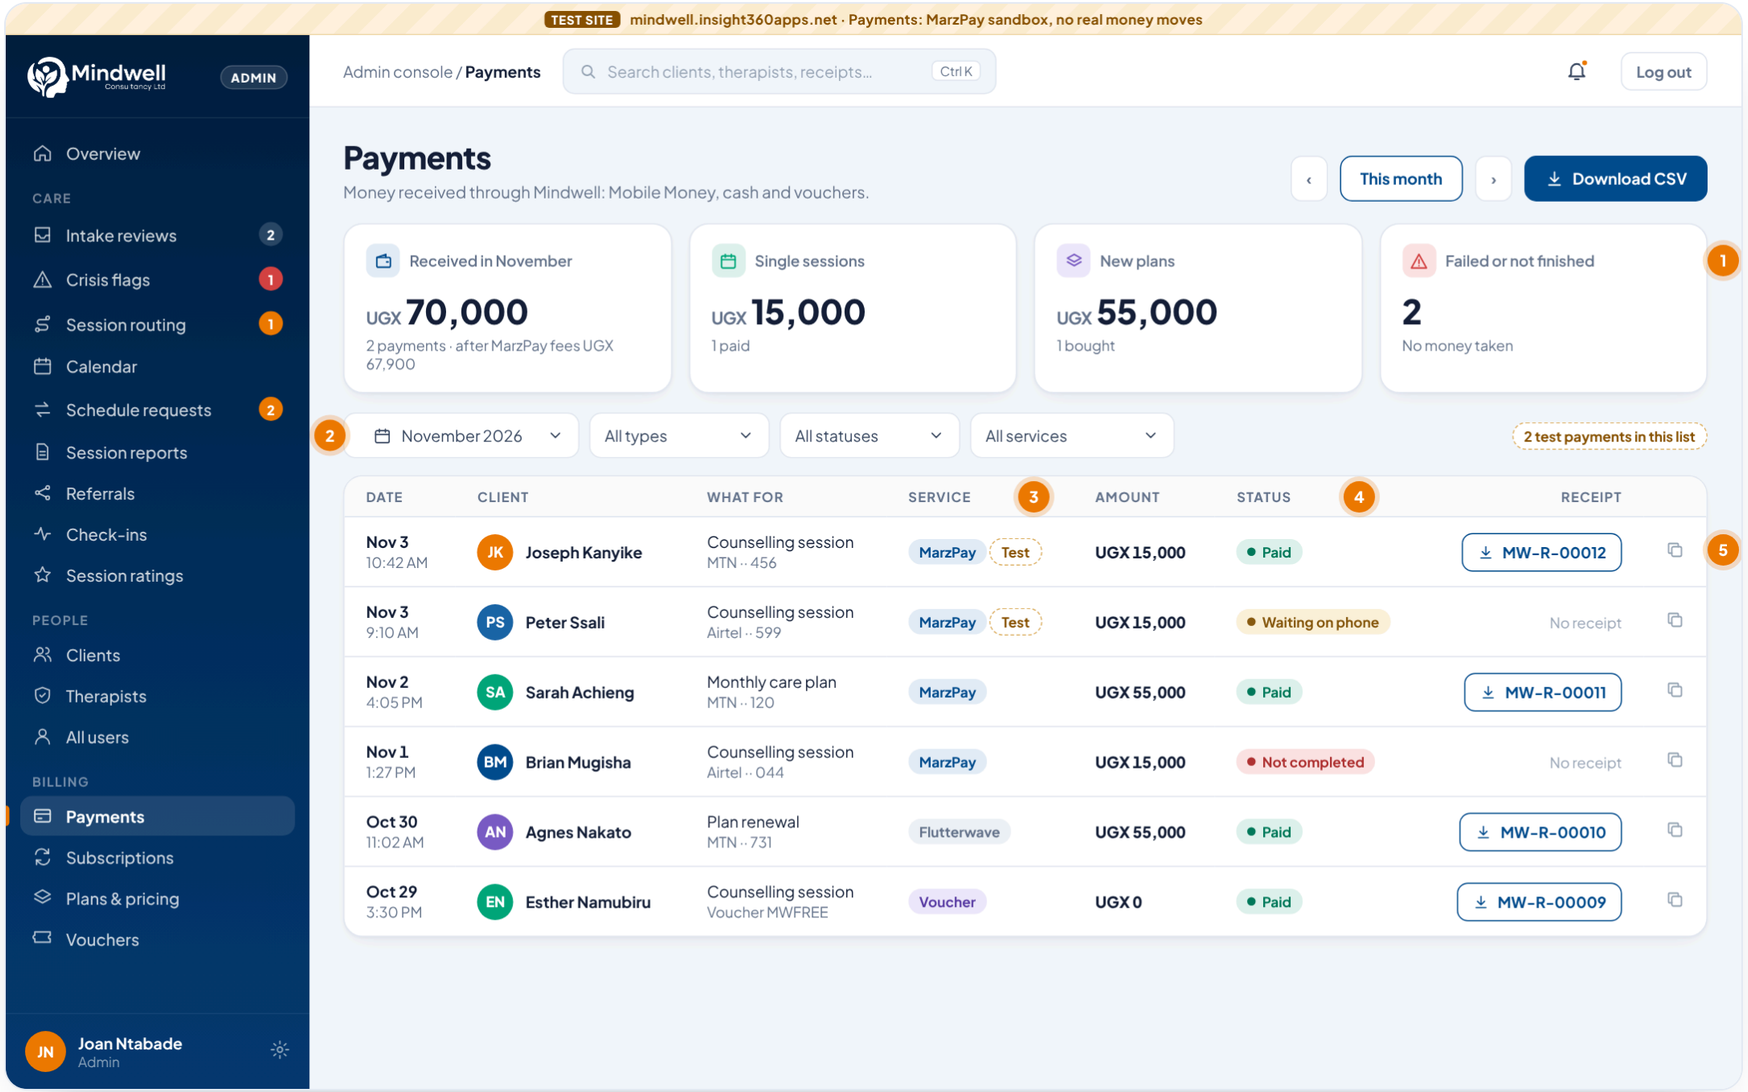

3 Tiles that say something
"All done" in green when no reports are due, and a trend for clients and rating.

4 Countdown chips
"In 25 min" (green, live) and "In 4 h" (grey) instead of orange Join buttons hours ahead.

5 Mood dropped alert
Two low check-ins in a row show up here. The data already exists in journal check-ins.

. Phone: bottom tabs
Same pattern as the client web and app: Today, Calendar, Sessions, Messages, Clients.

Payments

1 Money after fees, and failures
The first tile shows what lands after MarzPay's 3%. A "failed or not finished" tile replaces the empty renewals tile when there are none.

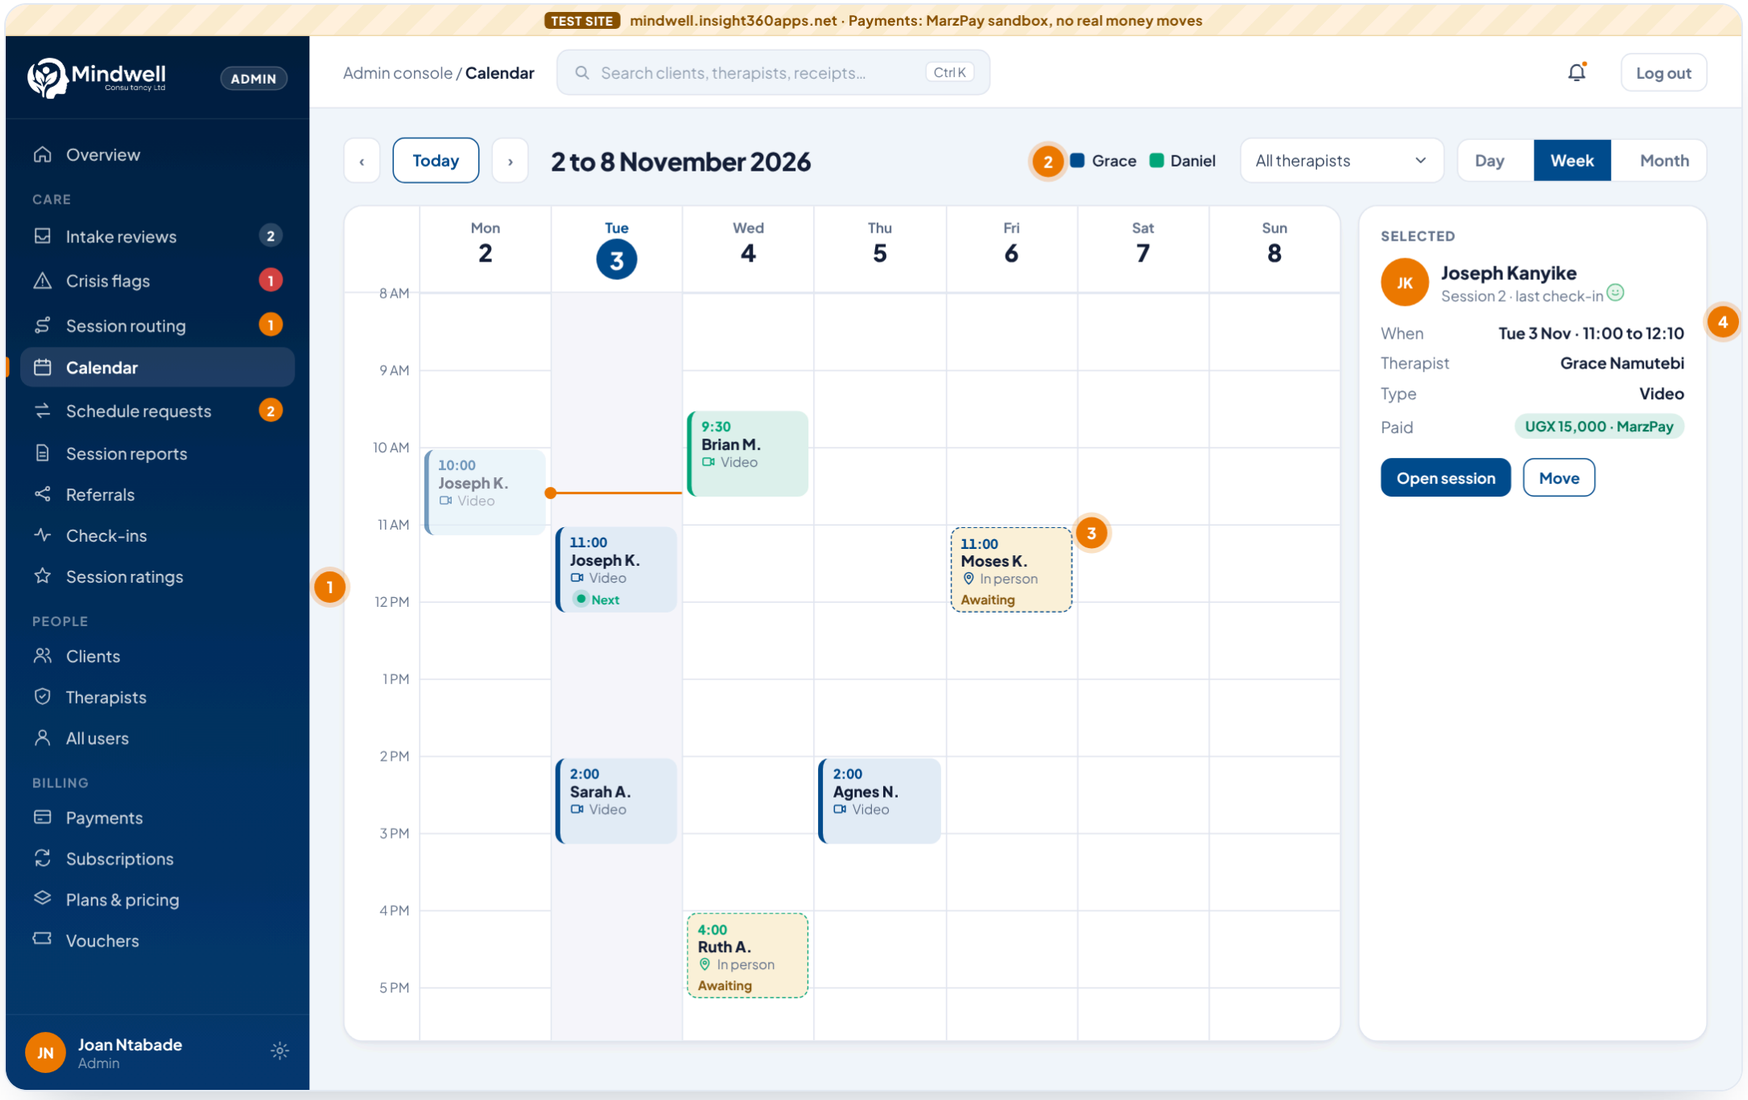

2 Filters that read properly
The clipped-text bug is fixed, and there's a new "All services" filter (MarzPay, Flutterwave, voucher, cash).

3 Service and test chips
One look tells you where the money went and whether it was a sandbox payment.

4 Plain-English status
"Waiting on phone" (amber) and "Not completed" (red) instead of pending and failed.

5 Receipt button and copy reference
The long MW-S / MarzPay reference moves behind a copy icon, ready to paste into the MarzPay dashboard.

Calendar

1 Blocks that fit
Time, client's short name and video or in person. Nothing gets cut off; the full details move to the side panel.

2 One colour per therapist
With a legend. Admins can see whose day is full without opening each block.

3 Awaiting approval looks different
Amber, with a dashed border and the word "Awaiting". Past sessions fade.

4 Richer side panel
Client, session number, last check-in face, therapist, type, and whether it's paid (and how).

· "Now" line
An orange line marks the current time on today's column.

SCOPE

What it would take

PART	WHAT CHANGES	EFFORT
Shared staff style	Navy sidebar, font, buttons, cards, chips and canvas, all in one style file (like the client one). Every admin and therapist page picks it up at once.	1 day
Admin overview	Trend tiles, ranked attention list, mood faces, payment service card.	½ day
Therapist dashboard	Next-session card, countdown chips, mood-dropped alert, phone order and bottom tabs.	1 day
Payments	Filter fix, service and test chips, plain statuses, copy reference, fees tile.	½ day
Calendar	Short blocks, therapist colours, awaiting style, side panel, now line.	½ day
Test-site ribbon	Staging and local only, never live.	1 hour

No database changes and no app (APK) changes. It ships as view and style files, so it can go up with the next upload.

What stays exactly as it is

Menu structure and page names; every route and permission; session reports and receipts (already branded); the client side.

Needs a decision

Join window: how many minutes before a session the room opens (still waiting on Dr. Ntabade). The mockup uses 10.

Mood faces for staff: fine for therapists, and for admins only if Dr. Ntabade is comfortable with them seeing check-ins.

Admin payment switch: the card on the overview is where it would go, if you want it.

Suggested order

Do the migration upload first (it's ready). Then the shared style and payments fix, then the dashboards and calendar.
